MODIS Science Team Organization & Products

(products = derived information, i.e. *not* images)

Global MODIS Burned Area Product

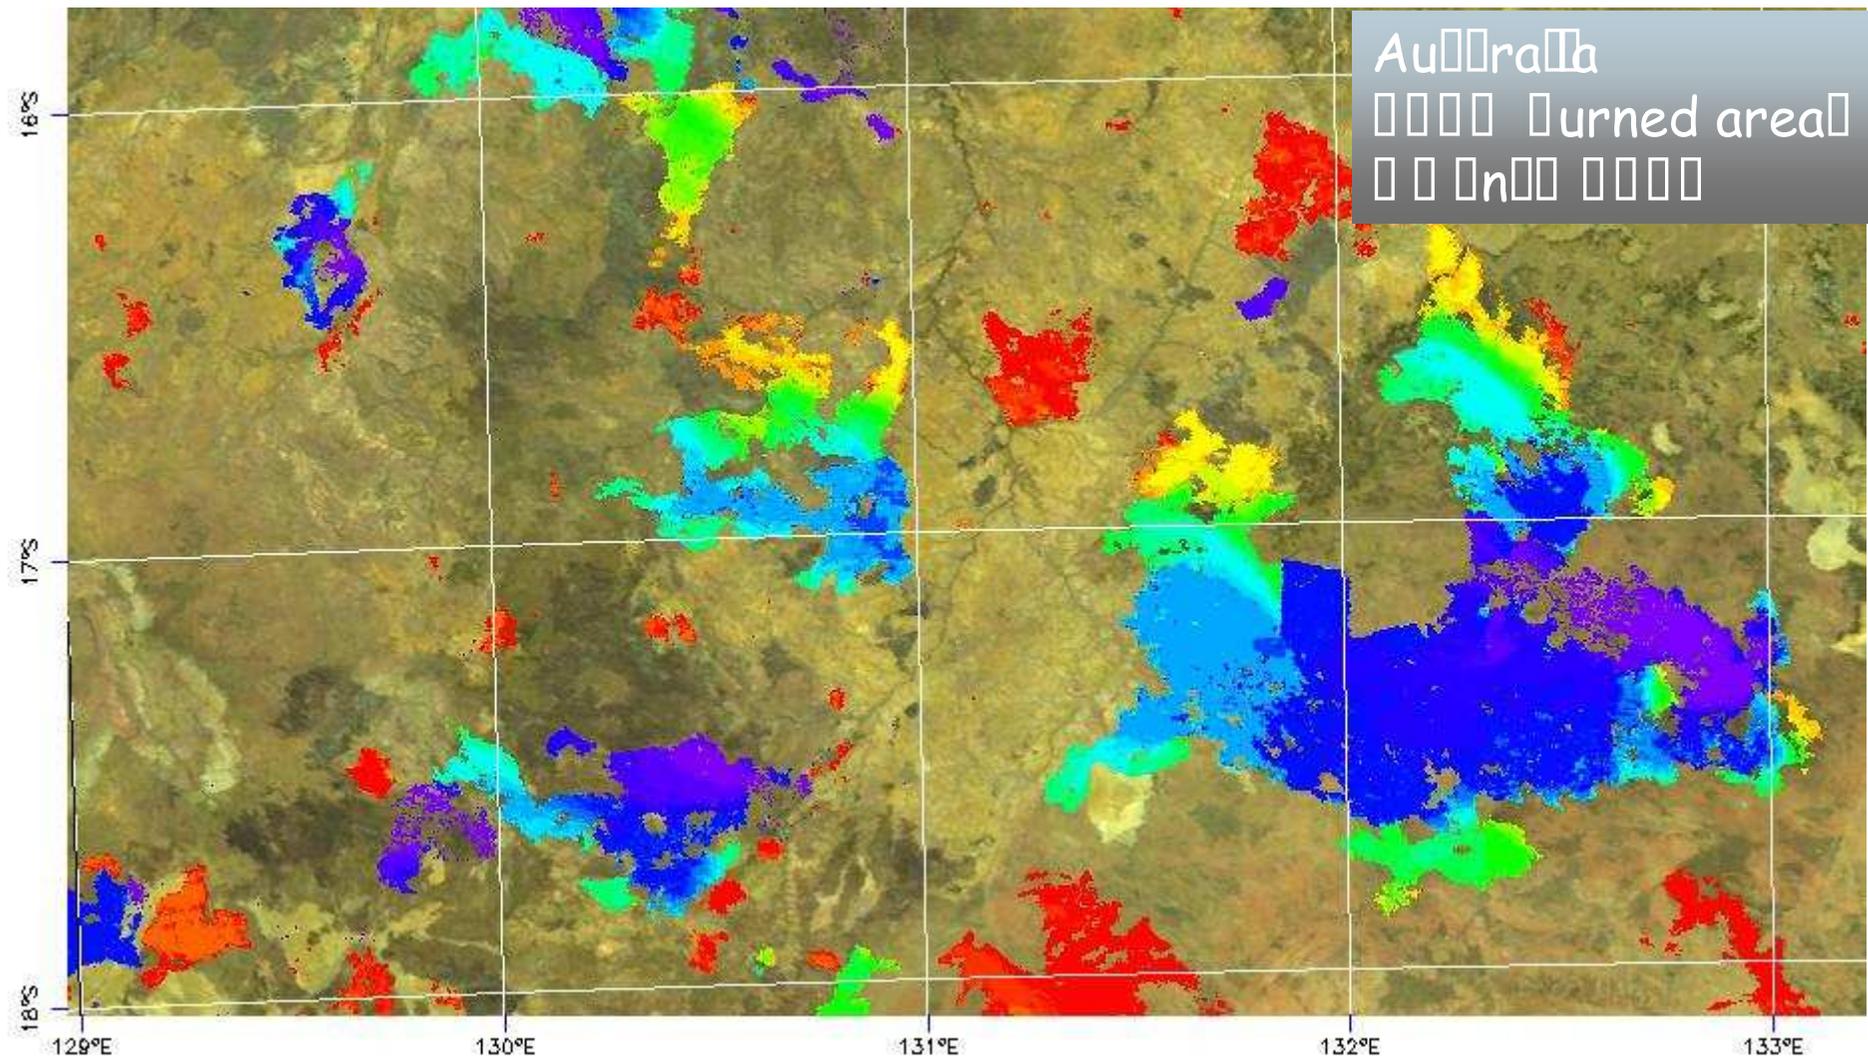

- Funded as part of NASA MODIS Fire Science Team (Justice *et al.*) to complement the well established (Collection 1,3,5) MODIS 1km active fire product
- Global applications
 - Green house gas & aerosol emissions estimation
 - Applied users (e.g., natural resource management)
 - LCLUC research (e.g., Fire – Climate – People)
- Product prototyping by regional algorithm development during the MODIS Collection 4 era
- Collection 5 processing now underway for MODIS data sensed 2000+ (reprocessing) and Feb. 2007+

The Global MODIS Burned Area Product

MODIS

- **Monthly Product (MCD45A1)**
 - 500m approximate day of burning over month +/- 8 days
 - 10x10 degree MODIS Land tiles
 - extensive QA & metadata
 - EOS-HDF
- **Annual Synthesis Product (forthcoming)**
 - as monthly product but for calendar year
- **CMG 0.25 deg product (forthcoming)**
 - aggregated information for climate modeling community (continental scale, easily accessible format)

Algorithm

- *Rolling BRDF based expectation change detection*
 - Semi-Physically based; less dependent upon imprecise but noise tolerant classification techniques; very few thresholds
 - Automated, without training data or human intervention
 - **Applied independently per pixel to daily gridded MODIS 500m land surface reflectance time series**
- => globally map 500m location and approximate day of burning**

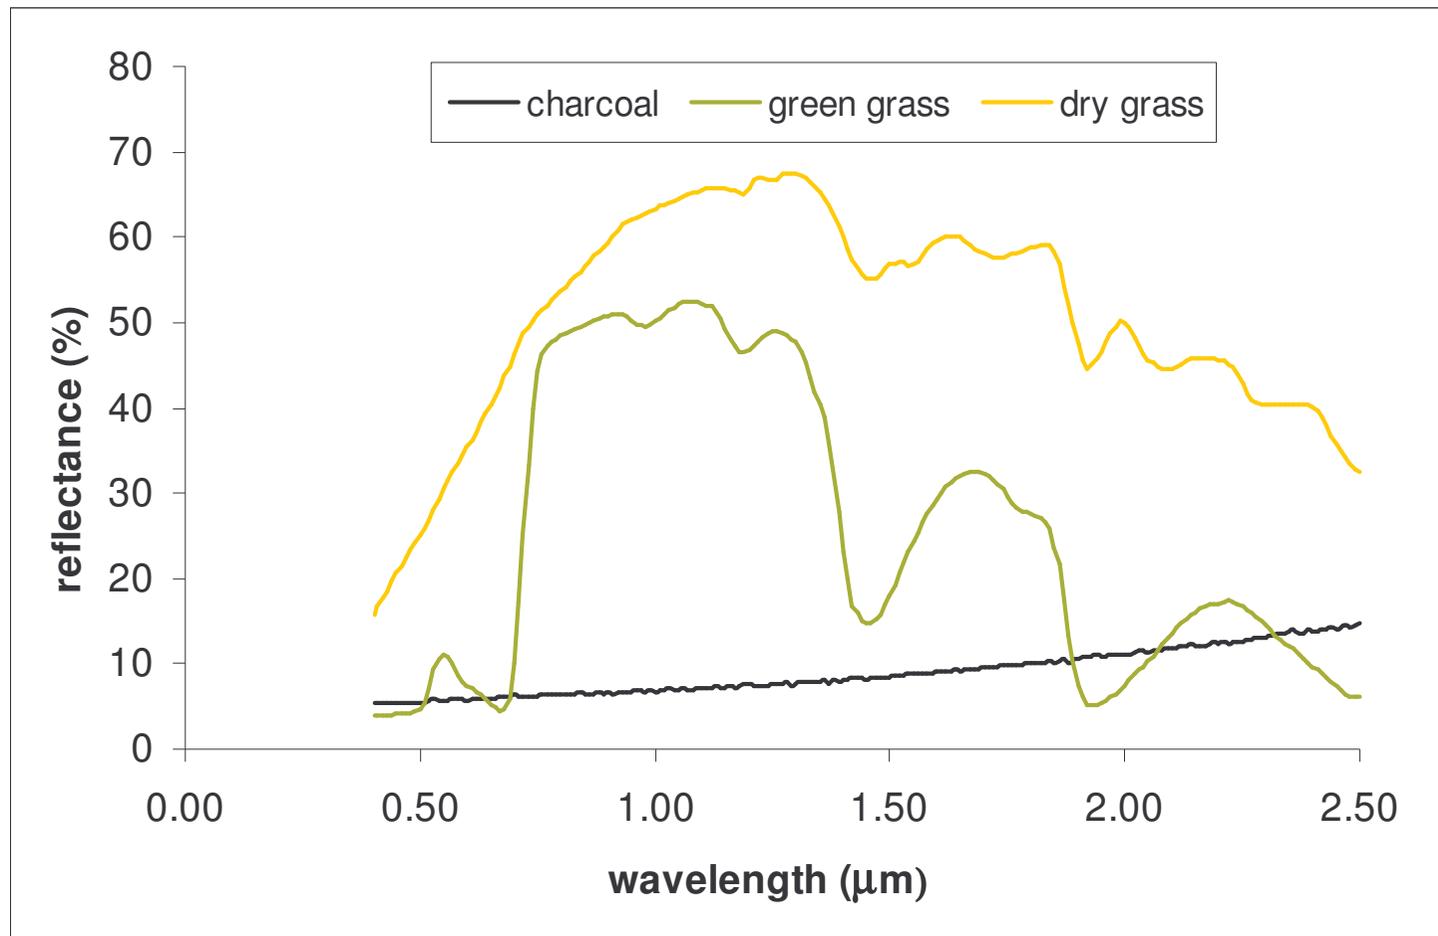

Burned Area □ C □ ara □ □ er □ □ ed □ □

- deposits of charcoal and ash
- removal of vegetation
- alteration of vegetation structure
- exposure of underlying material

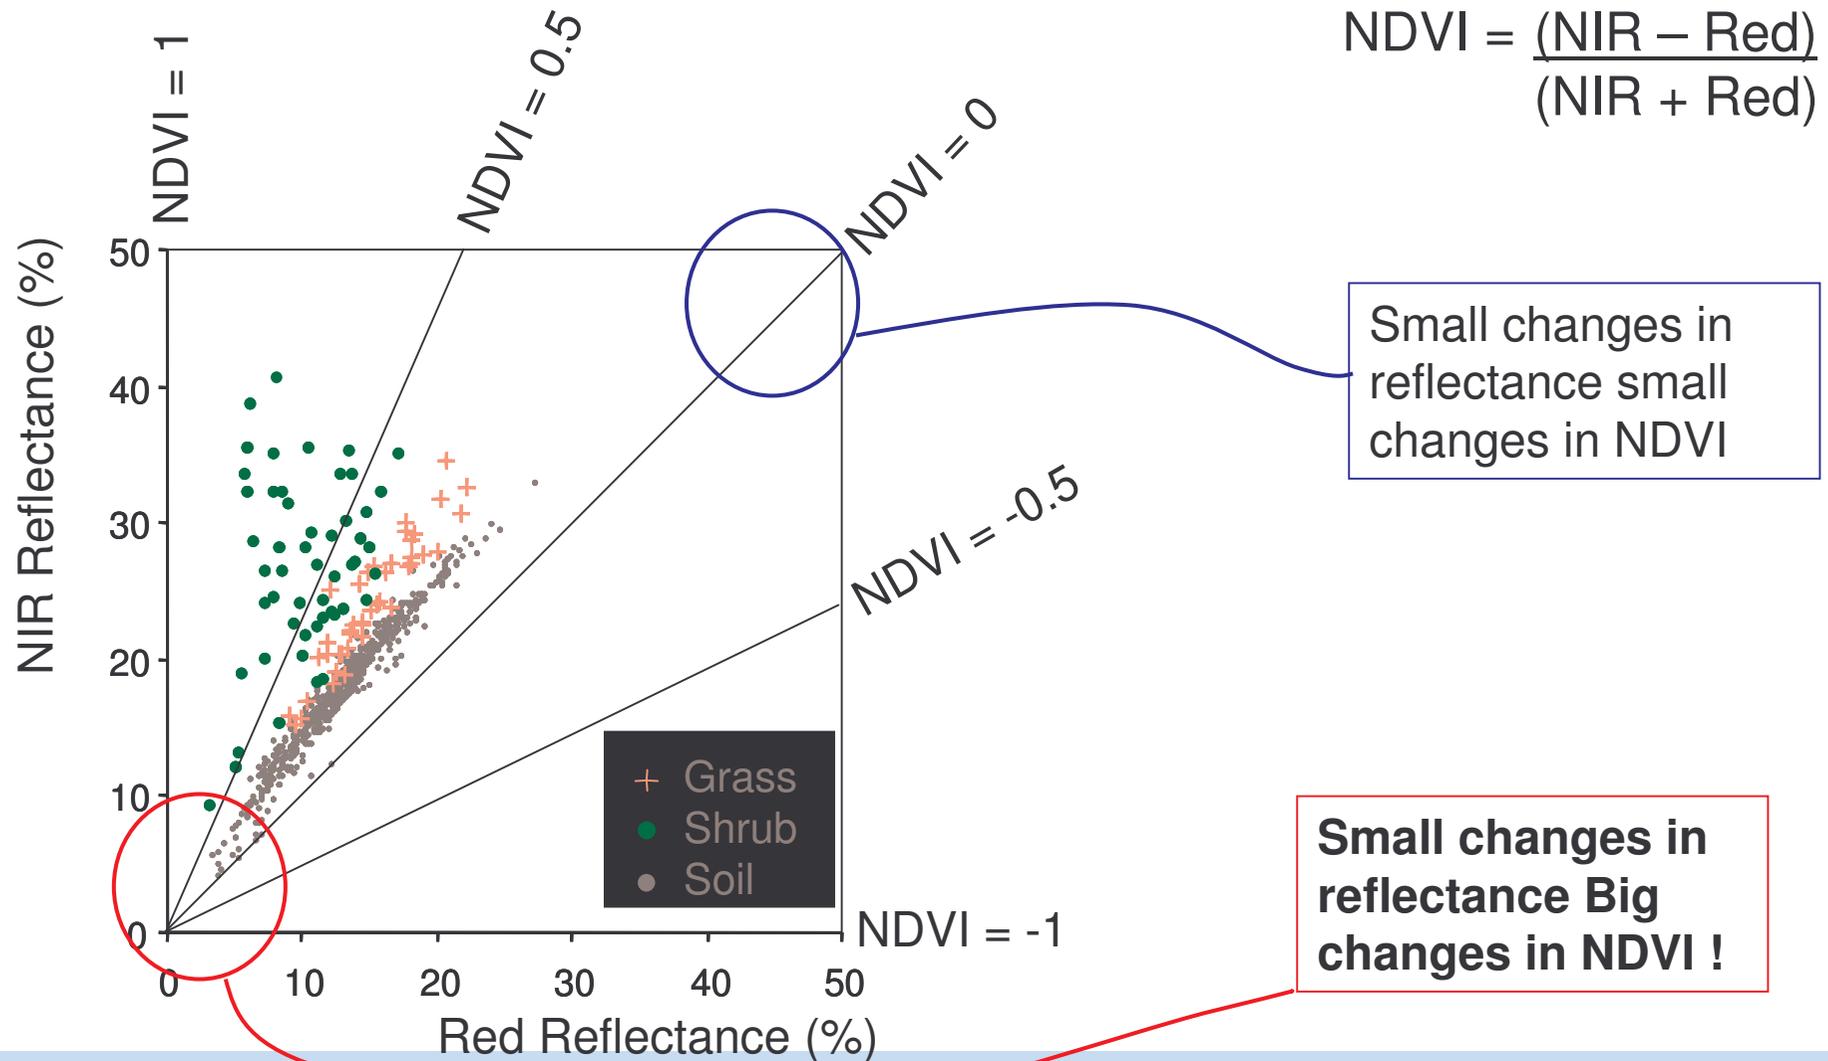

Cheikh Mbow,
Senegal

Land and Vegetation Direct Readout Workshop, October 2007, Mexico City

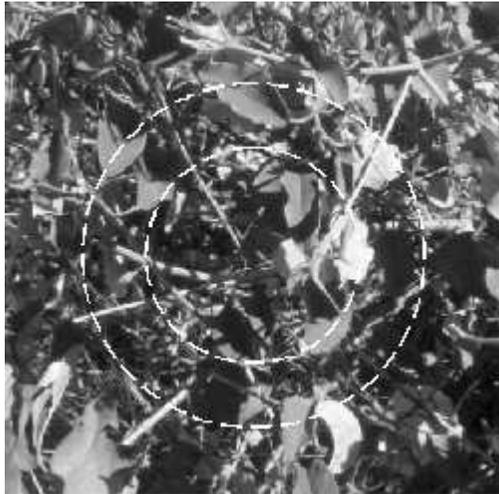

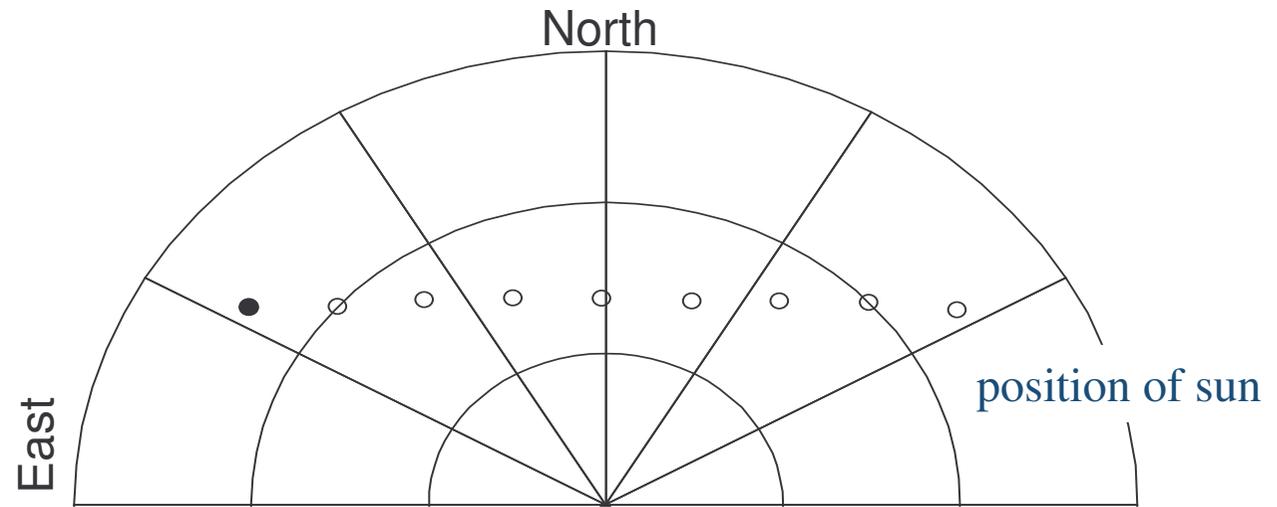

i.e. burning reduces reflectance at reflective wavelengths

NDVI is a better measure of burned area than
are the difference in reflectance

1. Field area
 2. Features in
 burned and
 unburned areas
 3. Per a day
 Na 1a

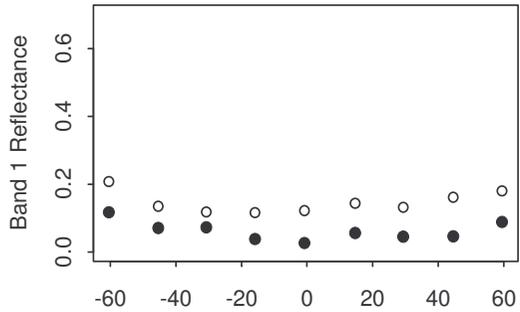

Unburned Shrub

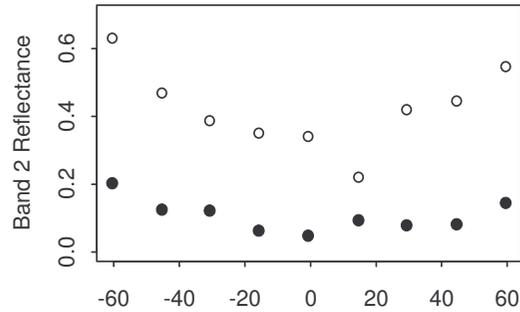

Burned Shrub

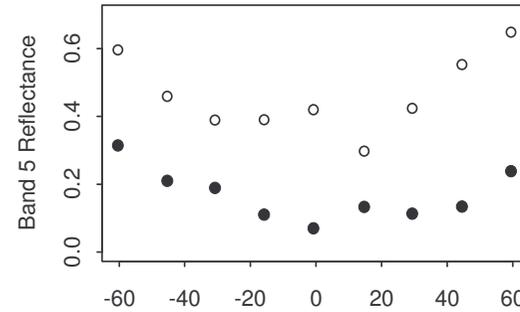

Unburned R 0.09 Burned R 0.09

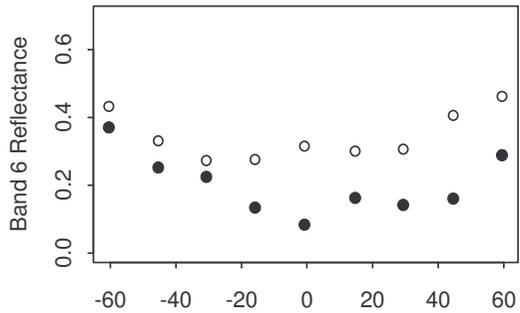

Unburned R 0.41 Burned R 0.15

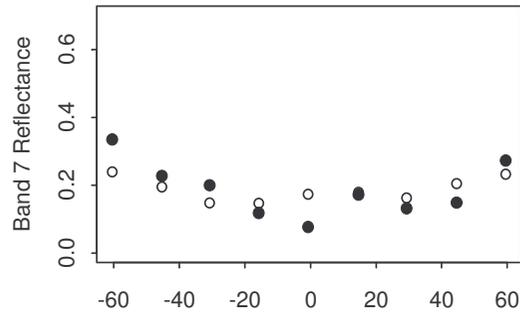

Unburned R 0.35 Burned R 0.24

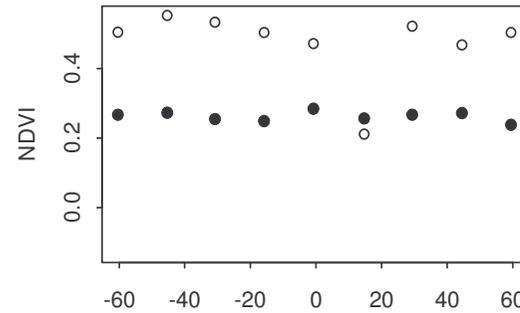

Unburned R 0.19 Burned R 0.29

Unburned R 0.09 Burned R 0.26

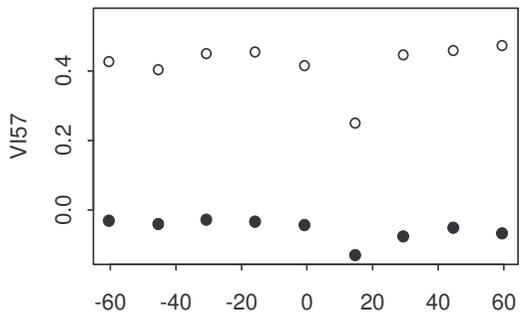

Unburned R 0.34 Burned R 0.05

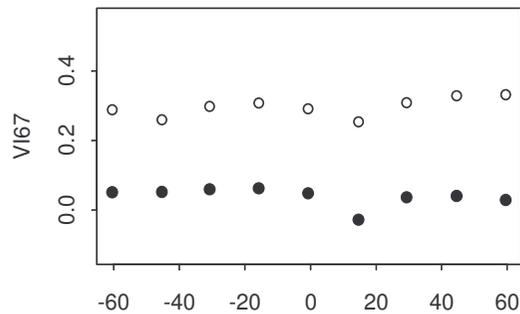

Solar Zenith * Sin (Solar Azimuth) (degrees)

Unburned R 0.22 Burned R 0.1

Solar Zenith * Sin (Solar Azimuth) (degrees)

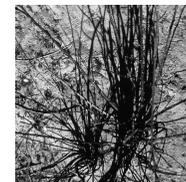

Unburned R 0.08 Burned R 0.09

Solar Zenith * Sin (Solar Azimuth) (degrees)

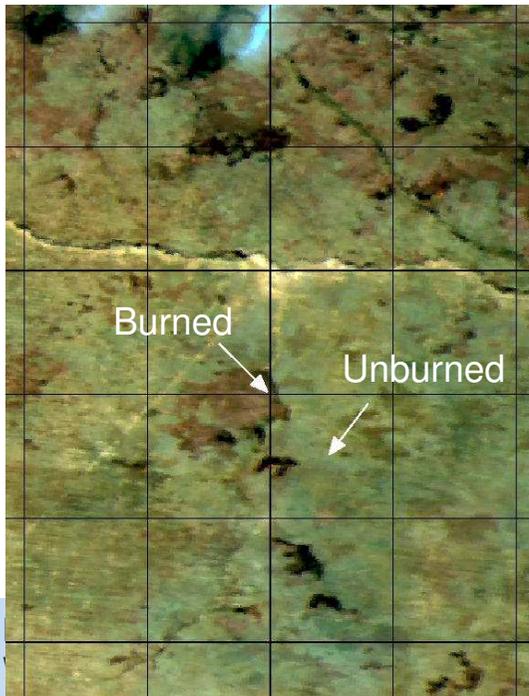

Unburned Shrub

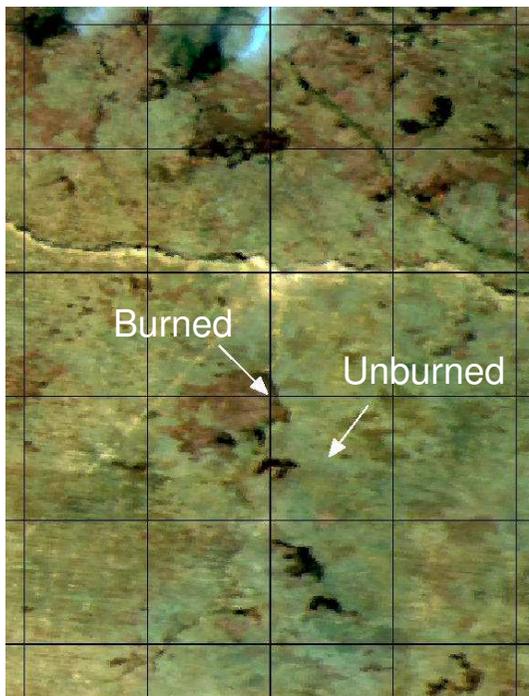

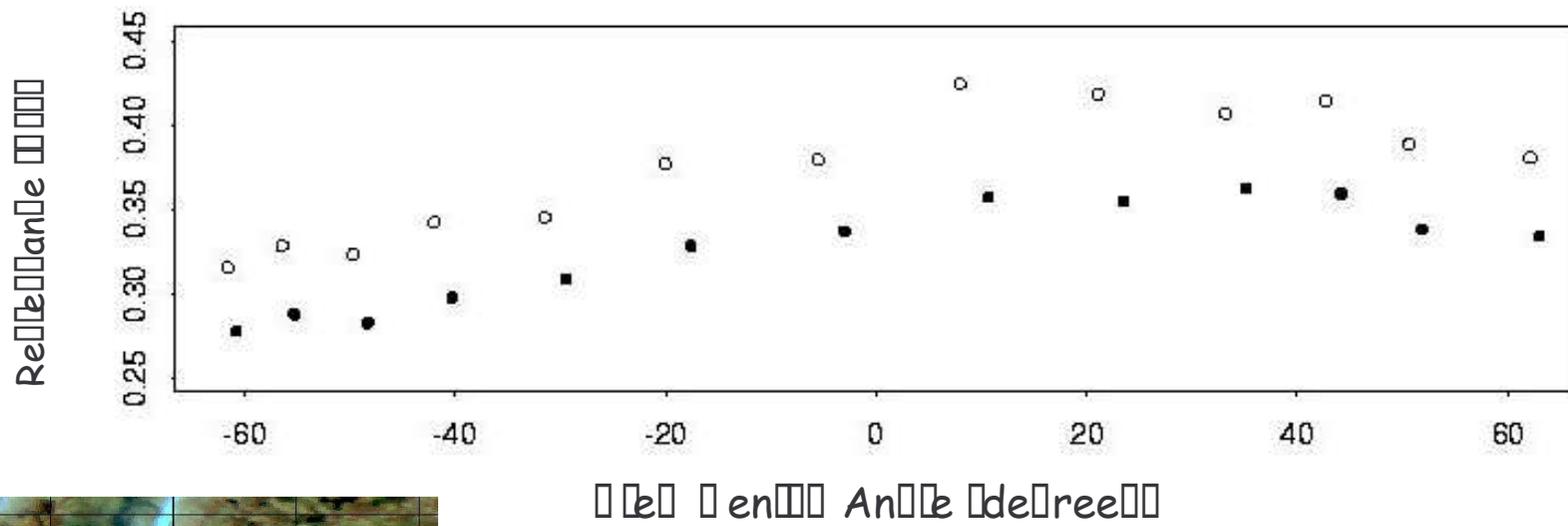

Burned Shrub

Terrestrial vegetation:

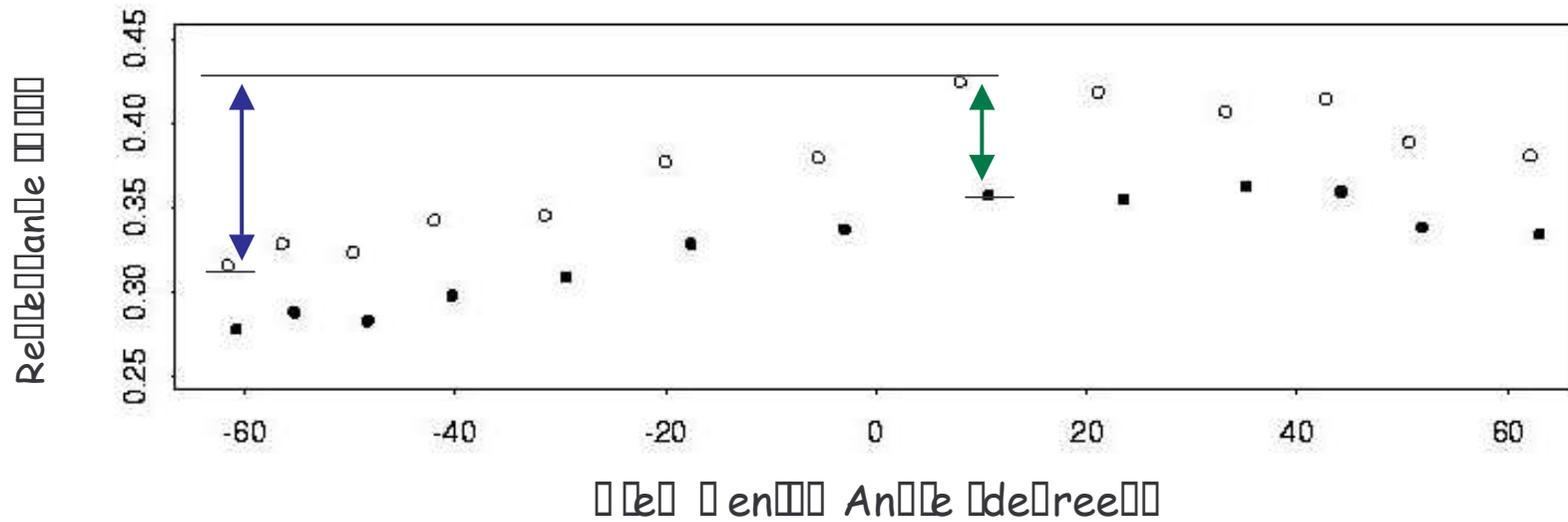

Use data from MODIS $2500\mu\text{m}$ and surface reflectance for unburned and burned forested areas

Analyzing Na₂ content in wood and tree bark and
other forest products

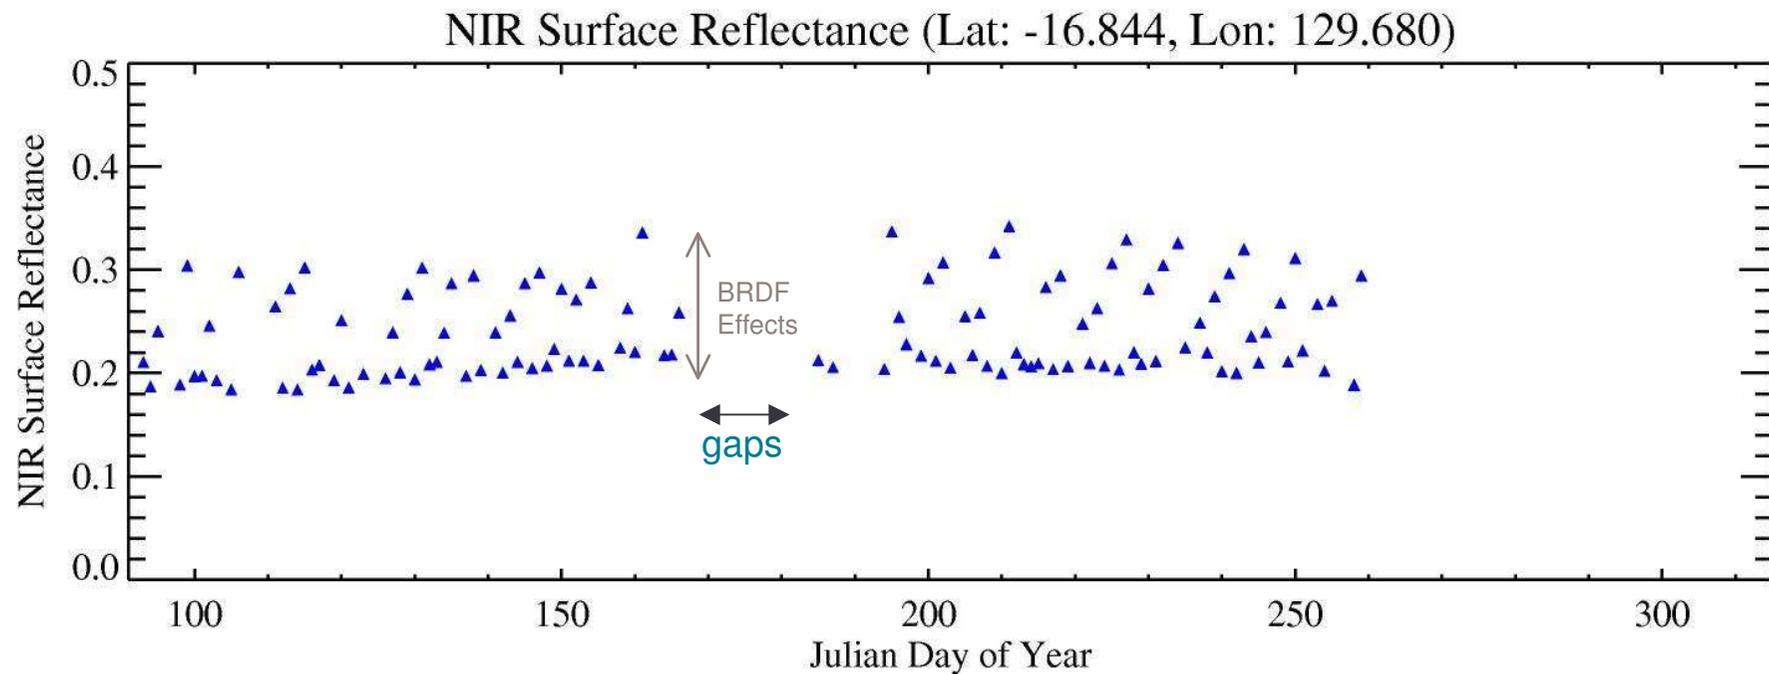

$\text{Al}^{3+}/\text{Na}^+$ molar ratio and
 the ratio

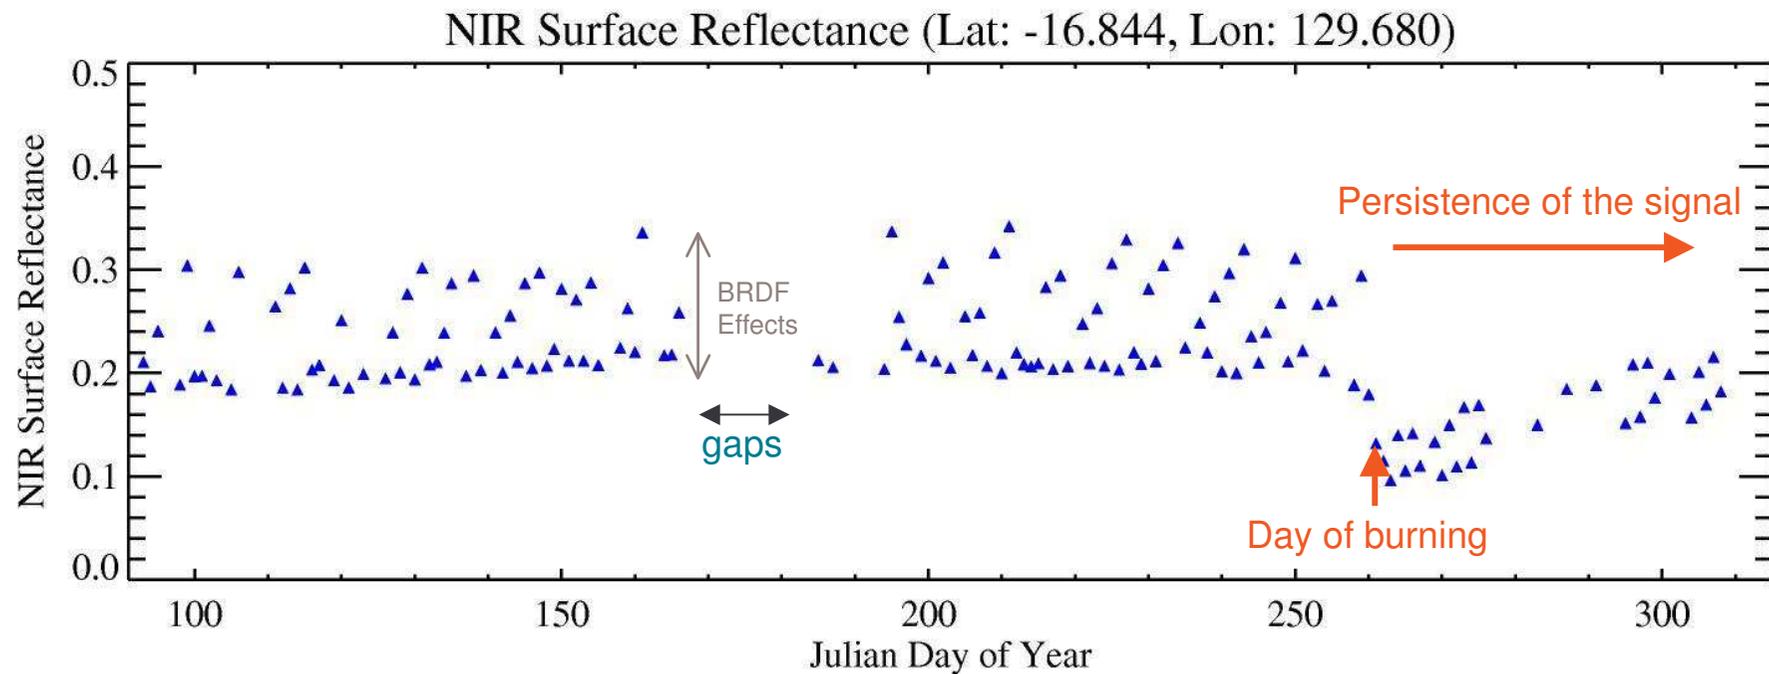

reflectance reduction **due to burning** < reduction **due to BRDF effects**

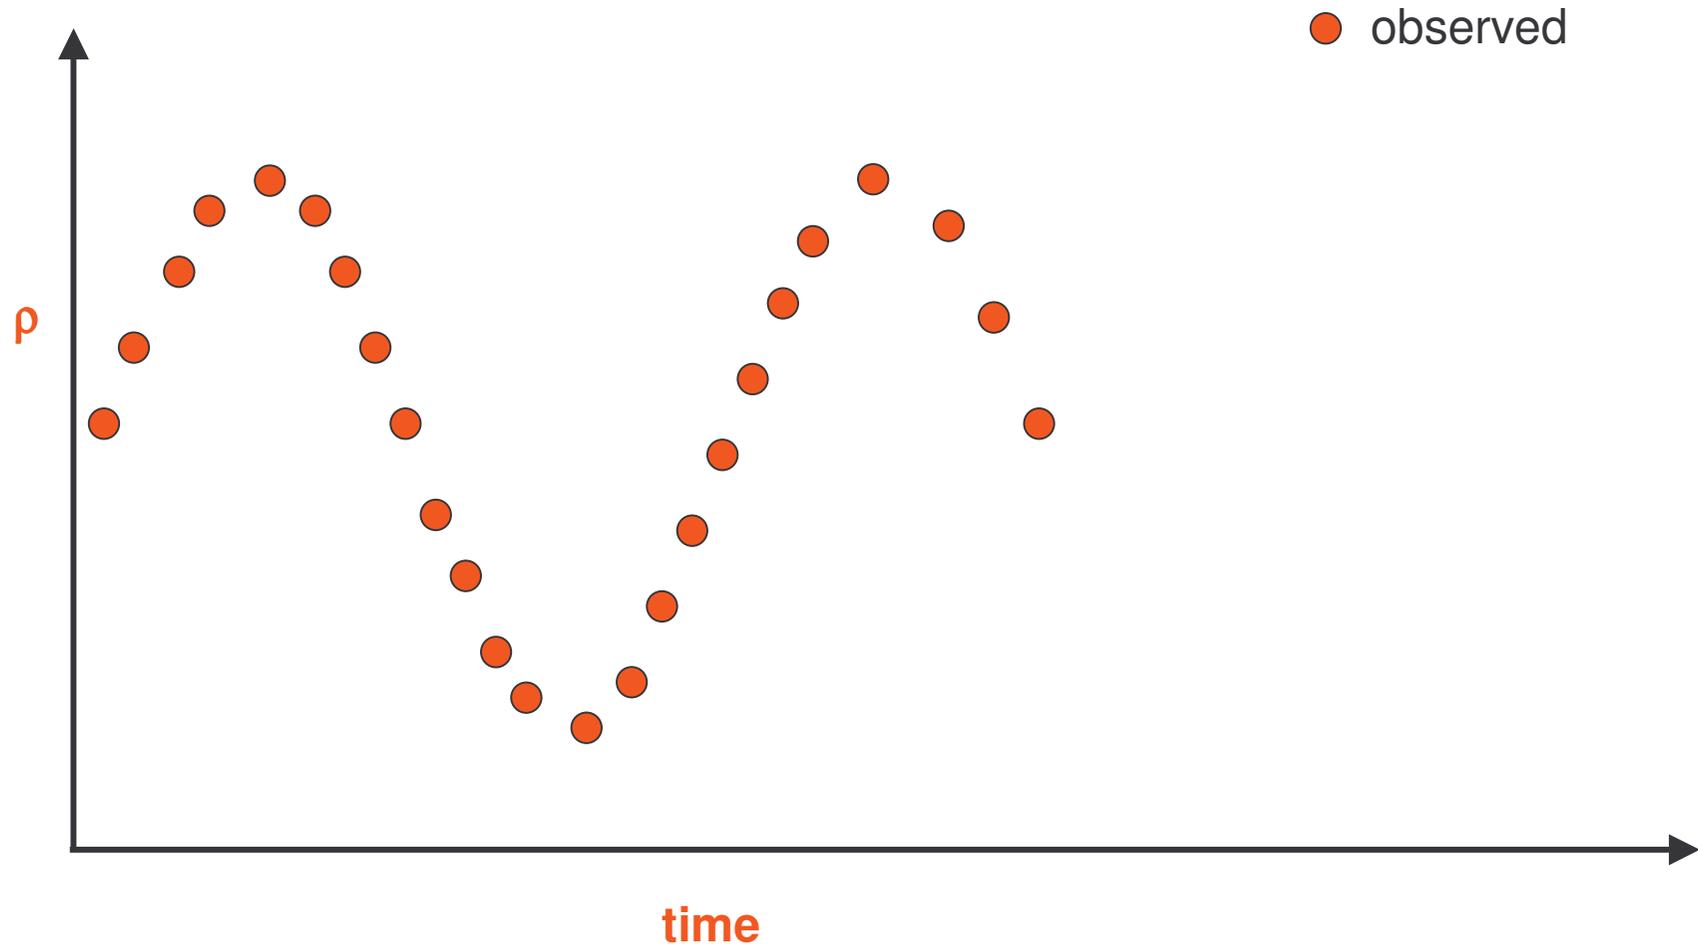

The challenge of change detection of Burned Areas
